

CDS's Top Tips

- 🦷 Brush twice per day for two minutes, last thing before bed and at one other time in the day.
- 🦷 Use a toothpaste with the recommended amount on fluoride. **Spit don't rinse!** (See toothpaste section for recommendations)
- 🦷 Use a smear of toothpaste for those under 3 years, and anyone over 3 years is to use a pea sized amount.
- 🦷 Replace your toothbrush every 3 months or when the bristles have splayed, or following any infectious illness.
- 🦷 Use positive reinforcement to encourage good behaviour and compliance when brushing.
- 🦷 Supervise toothbrushing until the age of 7.
- 🦷 Avoid sugary foods or drinks between meals.
- 🦷 Avoid excessive amounts of acidic foods or drinks.
- 🦷 Take children for their first dental visit when they get their first tooth or before their first birthday and be sure to attend regularly.

Tips For Brushing Your Child's Teeth

Providing NHS Dentistry

Toothbrush

Use a small headed, soft or medium bristled toothbrush. Replace the toothbrush every three months or before if the bristles have splayed. Ensure you replace your child's toothbrush following any infectious illness.

Toothpaste

Fluoride:

ppm = parts per million

0-6 years: containing at least 1000ppm

7+ years: containing 1,350 - 1,500 ppm

A household toothpaste containing a higher fluoride content provides the maximum protection for the whole family. (Whitening & sensitive toothpastes are not suitable for children)

Amount:

0-3 years: A smear of toothpaste

3+ years: A pea sized amount of toothpaste

When to brush

Begin to brush as soon as your child's first tooth erupts.

Teeth should be brushed twice per day.

Brush last thing at night (before bedtime) and one other time during the day.

Avoid eating or drinking half an hour before or after brushing. Children should be assisted and supervised when brushing until the age of 7.

Brushing technique

Brush for long enough to ensure each surface of every tooth is being cleaned. When all the teeth are present, this should be for **two minutes**, (30 seconds on each quarter of the mouth).

Start brushing from the back teeth and move your way forwards.

Allow the child to brush their own teeth whilst being supervised and then brush for them afterwards.

When brushing small children's teeth it could be helpful to stand from behind, whilst gently cradling their head. It may help to have a mirror in front of you for better vision.

When you have finished brushing, encourage the child to **spit out** and **do not** rinse with water. Discourage the child from swallowing the toothpaste.

Mouthwash is not needed, but if you choose to use this, ensure it is at a different time of the day to brushing.

Reluctant brushers

Keep toothbrushing fun!

Bath time can often be successful.

Role play visiting the dentist, being the dentist and practising opening wide are fun things to try too!

Remain calm and positive as this will likely reflect in the child's behaviour and attitude. Use positive reinforcement to reward good behaviour. E.g. Brushing chart with reward stickers.

Disclosing tablets are a fun and effective way for both you and the child to see which areas are being missed. (Always follow the manufacturers guidance and check the ingredients). Disclosing tablets are suitable for children who can spit out. Under 12 years should be supervised.

There are great free downloadable apps that can make brushing fun.

For example, Brush DJ.

Use a timer or play a two minute song for a visual reference of time.

Educate your child on oral health to demonstrate the importance of brushing. Our family fun page has fun and educational activities to help you do this. www.communitydentalservices.co.uk
